

CranioMandibular Rehab, Inc.

Unique Therapy Options for Jaw, Head and Neck Patients

CMR is dedicated to the treatment of head, neck and craniofacial patients. Our goal is to be a resource and partner in patient healing by utilizing simple, powerful technologies. We carry the widest selection of physical therapy devices for the treatment and health of the head and jaw.

Coordinated Care

CMR's Rehabilitation Coordinators collaborate with office staff and patients to provide seamless care by utilizing simple processes and forms, and years of experience.

Flexible Billing Options

We provide patient billing options that maximize coverage in this difficult insurance environment while helping patients access superior care. At CMR, we directly bill and appeal the patient's insurance as possible; which reduces the work and simplifies the process for the prescribing providers office.

24-hour Service

We are on-call 24-hours-a-day, ensuring that patients maintain their optimum rehabilitation program and receive constant technical and professional support. This service provides additional assistance to the patient and reduces calls to your office.

Jaw Motion Rehab Systems:

The OraStretch Press and TheraBite Systems

The **OraStretch** press and **TheraBite** jaw motion rehab systems are jaw exerciser and stretching devices to treat and prevent trismus, and joint dysfunction. They move along the natural anatomical motion of the jaw to increase the jaw range-of-motion and for easy, safe rehabilitation. A TheraBite pediatric system is available for patients under 10-years-old.

OraStretch Jaw Range-of-motion Scales

The OraStretch ROM scales are easy to read and use and they were newly designed to measure those patients with severely limited openings. The scales measure from 3 to 52 mm. The professional scales are disposable and come in packs of 50.

Pacer™ Continuous Passive Motion Therapy

Gently mobilizing the joint, the **Pacer** CPM stretches the muscles and ligaments, pumps vital joint fluid, relieves pain, and combats adhesions. Our CPM sets the bar for conservative and post-surgical rehabilitation of the jaw joint by increasing ROM, preventing adhesions, and propagating joint health. The Pacer CPM also tracks patient compliance with the unit.

Supplements to Therapy and Rehabilitation

CMR also carries other a selection of hot/cold therapies to help reduce swelling and pain following craniofacial surgeries. We offer two hot/cold head wrap options. We also offer a rental of the premium hot/cold cooler system, which provides constant cooling for the easiest and most comfortable recovery.
